

A heatmap visualization of the 2010 US Census data for the variable 'Age'. The heatmap is a grid of colored squares, where the color intensity represents the frequency or density of data points for each age group. The colors range from dark blue (low frequency) to light blue, green, yellow, and red (high frequency). The highest frequency is concentrated in the middle-right section of the grid, indicated by a bright yellow and red square. The overall distribution shows a concentration of data points in the middle-right area, with a slight tapering off towards the bottom right.
